About Fusion's Topical Pain Cream

Fusion Specialty Pharmacy's topical pain cream can be used to treat numerous types of pain including but not limited to: arthritis, neuropathies, surgery, trauma, sprains, etc.

Many commonly prescribed, commercially available pain relief medications help the symptoms associated with chronic conditions such as arthritis, fibromyalgia, migraine headaches, and other nerve and muscle pain, but they can also result in unwanted side effects such as drowsiness, dizziness or stomach irritation. Many patients taking these medications come to accept these conditions as part of daily life, but they may find a better solution through pharmacy compounding.

Compounding offers personalized pain relief.

The Compounding Solution

Fusion Specialty Pharmacy offers patients customized options for pain medication and provides a valuable benefit to those for whom pain management has become a way of life.

Every individual is unique, and the types of pain experienced can be equally diverse. By working with a Fusion compounding pharmacist we can recommend treatments tailored specifically for your pain management needs and speak to your provider for prescription authorization.

Alternate Dosage Forms

Because of Fusion's ability to create different methods of delivery, we can help reduce stomach irritation or other unpleasant side effects. Instead of a capsule or tablet, pain medications often can be compounded as:

- A topical gel, cream or spray form that can be applied directly to the site of the pain and absorbed through the skin.
- A custom-flavored troche that dissolves under the tongue, a nasal spray, or a suppository.

Such dosage forms may bypass the gastrointestinal tract, providing optimal results with less GI irritation, and help patients who have difficulty swallowing pills, removing yet another source of aggravation.

Combined Formulations

On many occasions, multiple medications can be combined into a single dose of a specially prepared compound that combines the medications into a single capsule or topical preparation, providing greater convenience for the patients who suffer from multiple symptoms related to chronic pain.

Strength Variations

Because patients vary in size, symptoms, and pain tolerance, Fusion can customize a dosage form that best suits the patient's needs, which most patients cannot attain with over-the-counter medications.

Fusion may also help improve a patient's quality of life by providing relief with potentially fewer side effects and less overall medication.

What if the medication doesn't relieve my symptoms?

Not to worry! At Fusion Specialty Pharmacy we will work with you and your physician to formulate a compounded prescription that includes the right medication for your needs.

It is important to know what types of medication(s) or other therapies you have used, and what side effects you may have experienced in order to gather your baseline information.

How do you get a Topical Pain Cream Prescription?

Contact Fusion Specialty Pharmacy TODAY! Our pharmacists are available to speak with you. We will also work with your provider to get your prescription approved.
